## Office Action Summary

Application No.	9/245499	Applicant(s)	
Examiner	Cerec	Group Art Unit	2827

—The MAILING DATE of this communication appears on the cover sheet beneath the correspondence address—

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, such period shall, by default, expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).

### Status

Responsive to communication(s) filed on 1/7/02 w/ 3 month suspension request.

This action is FINAL.

Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 1 1; 453 O.G. 213.

### Disposition of Claims

Claim(s) 115-116, 123-131 is/are pending in the application.

Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.

Claim(s) \_\_\_\_\_ is/are allowed.

Claim(s) 115-116, 123-131 is/are rejected.

Claim(s) \_\_\_\_\_ is/are objected to.

Claim(s) \_\_\_\_\_ are subject to restriction or election requirement.

### Application Papers

See the attached Notice of Draftsperson's Patent Drawing Review, PTO-948.

The proposed drawing correction, filed on 1/17/01 is  approved  disapproved.

The drawing(s) filed on 2/5/99 is/are objected to by the Examiner.

The specification is objected to by the Examiner.

The oath or declaration is objected to by the Examiner.

### Priority under 35 U.S.C. § 119 (a)-(d)

Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).

All  Some\*  None of the CERTIFIED copies of the priority documents have been received.

received in Application No. (Series Code/Serial Number) \_\_\_\_\_.

received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

\*Certified copies not received: \_\_\_\_\_

### Attachment(s)

Information Disclosure Statement(s), PTO-1449, Paper No(s). 32  Interview Summary, PTO-413

Notice of Reference(s) Cited, PTO-892  Notice of Informal Patent Application, PTO-152

Notice of Draftsperson's Patent Drawing Review, PTO-948  Other \_\_\_\_\_

## Office Action Summary

**DETAILED ACTION**

*Drawings*

1. The drawings are objected to by the examiner for improper cross hatching. All the parts shown in section should be cross hatched according to MPEP 608.02, page 600-81.

The drawings are also objected to because those figures showing that which is old are not labeled with a prior art legend. Such a label is required. See, **for example**, the brief description of figure 1a.

Also, the embodiment of the invention claimed is not shown in the drawings and explained in the detailed description of the invention. An illustration and explanation are required. Please note that all of the features of the elected invention should be shown in a single embodiment. In response to applicant's traversal that figure 8 discloses all of the features, examiner points out that paper #9 elects the species of figures 18, 19 and 21 with the contact of figure 15. One of these figures must contain all of the claimed features or the election changed.

The drawing corrections received 7/2/01 are not approved (therefore, none of the changes are entered), because figure 1b is described in the specification as old in the art, yet is not labeled with a prior art legend. Moreover, the figures do not include a figure which shows all of the features of the claimed invention in a single drawing. Please note that the elected contacts are those of figure 15: the S-shaped, single-stem contacts. The elected combinations are those of figures 18, 19 and 21. Figure 21 is the only figure which shows the single-stem, S-shaped contacts. But, figure 21 does not show the second substrate which is claimed in claim 131. As such, the claimed subject matter is not shown.

The proposed cross hatching patterns are correct. Examiner suggests adding corrections for figure 1b and the figures to show all of the claimed elements to the corrections of 7/2/01 and

resubmitting the corrections. Please submit drawing corrections in compliance with MPEP 608.02(v) in response to this office action.

***Treatment of Claims Based on Prior Art***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 115-116, 123-131 are rejected under 35 U.S.C. 102(b) as being anticipated by Kanji et al. (US 5067007, hereafter Kanji).

Kanji discloses a substrate (6) having terminals (8) and flexible, resilient interconnection elements (11), each having an attached end, elongated section and a tip pointing away from the substrate. See figures 1A, 1C and 1D. The elements have elongated elements of a first material (11A) attached to the terminals and a second material (11B) coating the elongated elements. The first material is flexible without the second material and comprises Cu, column 7 at line 63, and the second material provides resiliency and springability and can be Ni or Au, column 7 at line 65, directly on the first material.

The elongated section has at least one bend as shown for example in figures 1C or 7C. The tip is capable of releasable attachment to a terminal, and Kanji teaches second substrate (1) coupled to the contacts. Please note that the contacts can be detached from the second substrate, therefore they are

releasable.

*Response to Arguments*

4. There are no unanswered arguments on file.

*Closing*

5. Any inquiries concerning this communication or earlier communications from the examiner should be directed to Examiner K. Cuneo at (703) 308-1233. Examiner Cuneo's supervisor is SPE David L. Talbott whose telephone number is (703) 305-0993.
